Downloading Spreads Hotfix

This patch is to allow users to download spreads from the Preview window. This will only be available from the downloads button in the Preview window. The List View function for downloads will remain as is for this hot fix. This is an interim solution. There will be a full revision of the solution for both Preview and List View early in 2012.

The fix will work by making a call to a separate dedicated server. To do this it will open a small window to ensure the connection remains open. This can be closed by the user once the download has started or it will close itself after a number of seconds.

Step 1 - User selects Download PDF as per normal

Step 2 - User receives a warning about using the downloading function for sending to print.

Step 3 - The call is made to the download server. This opens a small window. Once the download has begun this can be closed.
